PROFESSIONAL SUMMARY

Computer Engineering student and Machine Learning Engineer with hands-on experience building and deploying ML-powered backend systems using Python, Flask, FastAPI, PyTorch, and cloud infrastructure on GCP and Digital Ocean. Skilled in designing classification/regression pipelines, retrieval-augmented applications, and containerized microservices with Docker, Kubernetes, and CI/CD automation. Seeking a Machine Learning Engineer / Backend Engineer role to apply expertise in model deployment, scalable API design, and cloud-native infrastructure.

EDUCATION

Bachelor of Engineering, Indira College of Engineering and Management, Pune

Savitribai Phule Pune University, Computer Engineering · SGPA: 8.83

2023 - Present
(Expected Graduation: 2027)

TECHNICAL SKILLS

Programming Languages	Python, Java, C++
Backend Technologies	Flask, FastAPI
ML/DL Framework	PyTorch/TensorFlow, Scikit-Learn
Data & Storage	MySQL, MongoDB, Redis
Infra & DevOps	Docker, Kubernetes, CI/CD
Cloud Platform	Google Cloud Platform, Digital Ocean

EXPERIENCE

Machine Learning Intern

codeXslinger · Pune, Maharashtra

Jan 2025 - Mar 2025

- Collaborated with engineering, data, and product teams to develop and deploy ML solutions for multiple client projects, ensuring seamless integration with existing systems.
- Designed and optimized classification/regression pipelines, consistently achieving +15% accuracy over baseline model through advanced feature engineering and model tuning.
- Automated model deployment using CI/CD pipelines, enabling rapid iteration, version control, and reliable roll-out of model updates.

PROJECTS

ReplyPilot

Nov 2025 - Jan 2026

[View](#)

- Built an automated customer-service email response system that interprets query intent and retrieves context from a dynamic knowledge base using SentenceTransformer embeddings and FAISS.
- Reduced manual response time and improved reply consistency by grounding generated replies in retrieved, context-relevant knowledge base entries.
- Deployed on GCP Cloud Run behind a GCP Load Balancer for scalable, low-latency request handling and high availability.

Backend	Python, Flask
Front-end	HTML, CSS, JavaScript
Database	MongoDB
Knowledge Base	SentenceTransformer Embeddings Model, Faiss Local Storage
Deployment	GCP Cloud Run, GCP Load Balancer

Portfolio

2026

[View](#)

- Designed and shipped a personal portfolio site with a vibe-coded frontend, enabling fast iteration on layout and visual design.
- Hosted as a static webapp on Digital Ocean, achieving below 1000ms average page load time and a Lighthouse performance score of 92.25/100 averaged across all categories.

Front-end	Vibecoded using React with Typescript
Deployment	Digital Ocean Static Webapp

ModelHub

- Built a centralized FastAPI service to manage and serve multiple ML models through a single API supporting synchronous and asynchronous inference.
- Implemented intelligent model routing and RabbitMQ-based background processing to improve inference throughput and reduce request queuing under load.
- Containerized and orchestrated the service with Docker and Kubernetes for reliable, horizontally scalable deployment.

Backend	Python, FastAPI
Front-end	HTML, CSS, JavaScript
Async Processing	RabbitMQ, Redis
Deployment	Docker, Kubernetes

CERTIFICATIONS

- Deep Learning (NPTEL) [View](#)
- Machine Learning Specialization (Coursera) [View](#)
- Cyber Security & Digital Forensics (CSI) [View](#)

ACHIEVEMENTS & EXTRA-CURRICULAR ACTIVITIES

- Finalist, Avinya 24-Hour Hackathon
- Silver Medalist, Deep Learning (NPTEL)
- Cybersecurity exploration and CTF challenges
- Robotics using ROS2 and ISAAC SIM
